An Introduction to Loops in Stata: ... The most common programming names when writing loops are the local macros "i" and "j". When written in the content of your loops, i and j should be written with a forward directional ` in front, and followed by an apostrophe '. It must be written this way or your loop will not work. For example: `i' or `j' You will make your claim about "i ...

I am going to give you a brief introduction and show you how to implement an SVM with Python. Our goal is to use an SVM to differentiate between people who are likely to have diabetes and those who are not. We will use age and HbA1c level to differentiate between people with and without diabetes. Age is measured in years, and HbA1c is a blood test that measures glucose control. The graph below ...

Stata users say it has some very slick programming facilities. (I'm not among them, so I can't say from experience.) The S dialects are killers for simulation studies. I benchmarked R against SAS/IML (in version 9.1) and found R was an order of magnitude faster. R is built entirely around an object-oriented programming interface. Language extensions are a snap. In my opinion bootstrap ...

Thus, computer literacy is also an essential skill for statisticians, and particularly familiarity with programs like Stata and SAS as well as the programming languages R and Python. Finally, all of that statistical analysis becomes much more useful for problem-solving if you are able to convey it effectively. Thus, compelling data visualization capabilities as well as strong written and ...
