Color psychology is the study of hues as a determinant of human behavior. Color influences perceptions that are not obvious, such as the taste of food. Colors have qualities that can cause certain emotions in people. Colors can also enhance the effectiveness of placebos. For example, red or orange pills are generally used as stimulants. How color influences individuals may differ depending on ...

Color psychology is on the same level as men's underwear. (We should ignore that, right? Yeah, let's ignore it.) After scouring the handful of studies available, I pieced together a model depicting the psychological effects of color. I call it the Kolenda Color Model (alas, I chose the narcissistic naming route).

2.3 Perceiving and Presenting Self ... But social comparison that isn't reasoned can have negative effects and result in negative thoughts like "Look at how bad I did. Man, I'm stupid!" These negative thoughts can lead to negative behaviors, because we try to maintain internal consistency, meaning we act in ways that match up with our self-concept. So if the student begins to question ...

Gender inequality in organizations is a complex phenomenon that can be seen in organizational structures, processes, and practices. For women, some of the most harmful gender inequalities are enacted within human resources (HRs) practices. This is because HR practices (i.e., policies, decision-making, and their enactment) affect the hiring, training, pay, and promotion of women.

Ma'am, if you are not in a black woman's shoes, going through oppression by people of your skin color, then you might want to not want to say stuff like that. We (as in myself and the black community) are not cared for and privileged like y'all are (the white community)- y'all have everyone and we only have ourselves and our families. We are just now coming up in life now just to be pulled ...
