Testing Java Classes By Example. Instead of testing static methods in a Java class, let's carry out unit test on a proper self-contained and encapsulated Java class with its own private variables and public operations. Suppose that we have a class called MyNumber that represents a number, and capable of performing arithmetic operations. Again, we shall work under Eclipse. Create a Java project ...

TestNG, as the name suggest, is the next generation test automation tool that fills the gaps in the JUnit framework. The basic idea behind the inception of these tools was to cut down the unit testing efforts during the Java development. However, these tools are now being utilized by the software testers for test-driven development. Since TestNG is the new entrant, it brings a list of cool ...

[Java – IBM Developer](#)

AnimalsTest.java (the only file that follows the \*Test.java naming convention) acts as the 'test suite' for the entire project. By default, Karate will load all \*.feature files from sub-directories as well. But since some-reusable.feature is above AnimalsTest.java in the folder hierarchy, it will not be picked-up.
